FOR IMMEDIATE RELEASE

TEMCOR SHIPS FIRST DOMES FROM NEW MANUFACTURING FACILITY

GARDENA, CA, April 10, 2001 – Just seven days after achieving full production status at their new manufacturing facility, Temcor has shipped its first order from the Rincon, Georgia plant. Twin 42' diameter Temcor Aluminum Domes have now been delivered to New England Tank Systems, Inc. of Plymouth, Massachusetts, the local Aquastore Tank dealer. The domes will top the two new Aquastore 150,000-gallon potable water tanks being installed for the Town of Plymouth. Temcor is the world's largest Aluminum Dome builder.

Temcor moved their manufacturing facility from Southern California when the lease on their West Coast plant expired earlier this year. The cross-country move took place over a 3-week period and was done in a "staggered move" plan where individual work centers were down for a short time, while other work centers remained in operation. "We were able to maintain a productive level of manufacture, even during this massive relocation," said Leland Sanders, Temcor's director of manufacturing. "We were fully operational for only a week before we shipped our first order. That speaks very highly of our operation here, and is a tribute to the Effingham County Development Authority who worked with Temcor to get the facility ready and helped with the recruitment effort."

Temcor has been building aluminum domes and other structures for more than 35 years and has more than 6,000 installations throughout the world in industries as varied as water and wastewater treatment, petroleum and scientific research. Temcor domes and roof systems for architectural applications are in place as sports arenas, cruise terminals, planetariums, churches, and more.
